

Programmer

Company Description: Offering a wide range of optical fibers products as well as fiber laser modules for high power lasers, CorActive is distinguished by its fibers for telecom and for pulsed lasers and its expertise in the multi-kilowatt laser. We cover the telecommunications market as well as the industrial material processing, the marking and the medical domains. CorActive works in an ever-changing industry where new challenges are constant and multiple. At CorActive, we rely on dynamism and innovation, while advocating a friendly work environment focused on the autonomy of employees. Led by passionate managers, our experienced and dedicated team (including several employees in position since the founding of the company) contribute greatly to the success of CorActive.

Main Functions :

- Perform programming for the automation of fiber laser production benches
- Manage the improvement of test beds and measurements of optical fibers and fiber lasers
- Develop human-machine interfaces for fiber lasers
- Manage the life time of programs developed
- Improve and improve existing production tools

To Apply: CorActive offers advantageous conditions (competitive salaries, flexible hours, work-family conciliation, group insurance largely paid by the employer, etc.). Qualified candidates are encouraged to apply by sending their curriculum vitae to the following address: ressources.humaines@coractive.com
